Black Lake Water Quality Study Update

Many of the issues of keen interest to the stakeholders of Black Lake have their root in sources of nutrients: harmful algae blooms (HABS), weed expansion, zebra mussel population changes, changes to the lake bottom and water clarity, productive fish habitat, etc. Come hear what we've learned about the sources of these nutrients in our lake and what we can do about them.

Reach out to Rusty Gowland at rusty@blacklakepreservationsociety.org with any questions.
